

ESOL Nexus professional development
ESOL in a family learning context

This project and its actions were made possible due to co-financing
by the European Fund for the Integration of Third Country Nationals

Introduction

ESOL Nexus professional development modules are intended to help teachers to develop in their role in a range of contexts. They have been written by expert practitioners and quality assured by a wider team. We hope that you will find this module useful. Further professional development opportunities can be found at

<http://esol.britishcouncil.org/content/teachers/staff-room/continuing-professional-development>

Family learning has always existed in its natural state where parental figures pass on skills to their offspring. There are many reasons, however, why parents and carers today are often disempowered to teach their children these skills. They may, for example, have negative feelings about learning or lack confidence. Family learning provision helps parents become effective learners and better equipped to support their children to thrive in a positive learning environment. It aims to support the whole family during life-long learning so that a culture of learning becomes the norm. This module focuses on teaching parents/carers with ESOL needs, as negative feelings and anxiety towards learning can be further compounded if language poses a barrier. This module addresses the concept of family learning, identifies key ESOL teaching approaches and techniques, and outlines themes and ideas for lessons.

Using this module

- You can either work through the module at your own pace, or join with others to look at the content together.
- If you are looking at the pdf on your computer you can type your reflections into the boxes provided, and save your progress for the next time you return to the module.
- There is a glossary at the end of the module, which explains any words that might be unfamiliar.

An introduction to family learning

Step 1

This step will help you to answer the following questions:

- What is the purpose of family learning and who is it for?
- What are the benefits of family learning?
- What types of family learning are there?

The National Institute of Adult Continuing Education (NIACE) describes a learning family as, “...one where every member is a lifelong learner in their own right. Family members of all ages are involved in each other’s learning activities and encourage each other. This helps to raise aspirations and create a long-term change in the culture of the family and patterns of learning. The combination of adults and children learning is crucial in building resilience in families, in creating community well-being, economic prosperity and social cohesion.”¹

In **Step 1A** you will learn more about the purpose of family learning and who it is for. Evidence shows that children achieve more when supported by their parents. Nevertheless, there are limitations to the abilities of parents to effectively support their children in a society that is progressing at an unprecedented rate. It is these limitations that family learning aims to address by seeking out those most in need.

In **Step 1B** you will focus on the benefits of family learning. You will consider the potential advantages for families and how they can use these to participate more fully in society and fulfil their potential.

In **Step 1C** you will discover more about the types of family learning provision and consider the concepts of 'Learning *for* the family' and 'Learning *with* the family'.

¹ NIACE Family learning <http://www.niace.org.uk/current-work/area/family-learning>
Accessed: 4th August 2014

What is the purpose of family learning and who is it for?

Activity 1

What are some of the possible problems for families where learning is not a priority? Watch the video below and then write down your thoughts.

Example: Children's imaginations are not developed with stories and discussion

Your thoughts

Watch video

Your suggestions may include the following:

- Children lack support at home and develop low self-esteem
- Parents feel inadequate to help their children and participate in society
- Aspirations are low as family members feel unable to fulfil their potential
- Social isolation can occur as parents and children struggle to engage fully with their peers

Step 1a

Step 1a

The purpose of family learning is to encourage a culture of learning within families, create a positive attitude towards education and raise aspirations. Parents/carers are given the opportunity to discover more about their child's education in addition to developing their own skills so that all family members are equipped to reach their full potential. It is based on the assumption outlined in the video that: 'Every family needs a chance to learn. They deserve a chance to learn together.'

It is impossible to pigeon-hole the type of learner who may access family learning classes, as their reasons for doing so are diverse. Motivation, future aspirations and previous educational experiences may also differ considerably. This is particularly relevant to ESOL learners, as language may be their biggest barrier to participation. While priority groups are often targeted by family learning programmes (and identification of these may well relate to socio-economic factors), there are no fixed admission criteria for those who seek to access provision.

Research indicates that family learning, due to societal and cultural norms, is largely accessed by women. It is key to encourage all family members to be part of the learning process and Ofsted recommend that all family learning providers should aim to target, recruit and retain more male learners².

Whatever their background, motivation, current situation or previous experience, the common bond that ties those who access family learning is a desire to improve; a willingness to make an effort for the sake of their own future and that of their families.

Accessed: 4th August 2014

Watch the video from Activity 1 again.

Example: help her to improve her English skills

Your ideas

The benefits of family learning

Activity 3

Ofsted research³ suggests that some of the wider benefits of family learning are:

1. Increased parental involvement in school life
2. Gaining employment
3. An increased social network
4. Improved parenting skills

Look at comments A-D below and match them with numbers 1-4. See answers in 'Suggested answers to activities'.

A. I was very lonely. I had no confidence in English. My child's headteacher told me about family learning. When I joined the class I was very nervous but I made new friends and now I'm very happy.

B. I was a very young mother when I arrived in the UK. I didn't know how to relate to my daughter. We didn't communicate. My family learning teacher told me about sensory walks. We do them now even when we go to the shops. My daughter loves this and now we talk all the time!

C. I no read write before live England. Family learning is good. Now have job cleaner mosque. I get job for my friend. She no speak any English! I pass reading Entry 1. I very good and happy!

D. Lola, who is from Albania, had no confidence and didn't speak much when she joined my family learning class. She now not only has the confidence to talk to her child's teacher but also the school governors! (Jennifer, family learning teacher)

Step 1b

Activity 4

Now watch a video which shows how family learning can change lives. Make notes about the potential advantages of family learning provision. Use the video as inspiration and also include your own ideas and experiences.

Watch video

Your ideas & experiences

You may have thought about some of the following ideas, which were also highlighted in a recent review by BIS⁴. The report aimed to update knowledge on the wider benefits of family learning.

- higher involvement in pre-school and school activities
- progression to further learning and employment
- improvement in confidence, self-esteem and interpersonal skills
- increased intercultural learning experiences
- improved parenting skills and decreased parental stress
- better understanding of school expectations and child development and improved capability to support learning at home effectively
- greater sense of family bonding and integration within the community
- raised aspirations for parents and their children
- promotion of active citizenship and increased personal responsibility

⁴ Department for Business, Innovation and Skills BIS RESEARCH PAPER NUMBER 93
Evidence of the Wider Benefits of Family Learning: A Scoping Review [Online]
Available from: [www.ofsted.gov.uk/resources/family-learning] Accessed: 4th August 2014

Types of family learning

Family learning provision is diverse. It spans from the very informal to the formal, and incorporates one-off ‘taster’ sessions to longer, accredited courses with a specific qualification as the main learning goal. It does not operate within the confines of a curriculum area, but as an approach to learning which evolves and adapts to the needs of those who access it. Provision takes place in a variety of venues ranging from schools and children’s centres to public facilities such as libraries and art galleries.

Whilst developing a culture of intergenerational learning within the family remains key, it is useful to make the distinction between learning with the family and learning for the family.

Learning *with* the family involves interaction between parents/carers and children. The sessions are very practical and parents/carers learn with their children to achieve a goal. Ofsted⁵ uses the term ‘wider family learning programmes’ and incorporates programmes that enable parents/carers to learn how to support their children’s development. Learning with the family, therefore, may not necessarily involve both parents/carers and their children being in the same place at the same time, but the emphasis is always on intergenerational collaboration.

To illustrate this further, take the topic of healthy eating. Learning with the family may involve a cookery session where the parent and child work together to produce a healthy snack. Alternatively, it may involve a more generic session aimed at parents/carers about cooking healthy food with the child at home. Although in this case the child is not

⁵ OFSTED Family learning [Online]
Available from: <http://www.ofsted.gov.uk/resources/family-learning>
Accessed: 4th August 2014

Step 1c

directly involved with the session, their development in a wider sense is still at the heart of it - the aim being to improve the diet and wellbeing of the child.

Learning for the family seeks to provide adults with the skills they need as parents/carers to facilitate their children's learning. Literacy, language and numeracy are central to this as these basic skills enable parents/carers to support their children with what they are being taught at school and empower them to take an active role in their child's education. Furthermore, these essential life skills help adults to see the benefits of education and help them participate more fully in society. The aim is to instil a positive cycle of learning and self-development and ultimately raise aspirations of the family.

On these kinds of programmes, the emphasis is often placed on working towards a qualification and following a clear progression route into either further study or better employment opportunities. For instance, a parent wishing to study on a Level 3 course may need to achieve Maths and Literacy Level 2 qualifications in order to do this. Learners who find it difficult to attend conventional ESOL classes because of family commitments are able to access more flexible learning opportunities through family learning provision.

Activity 5

Look at the examples below. Are these are examples of learning **with** the family or learning **for** the family?

1. A session about the importance of number games and suggestions for home activities.

☐ for / with ☐

2. An adult literacy course culminating in an exam based assessment.

☐ for / with ☐

3. A creative session during which the parent/ carer helps their child to make a small musical instrument.

☐ for / with ☐

4. An ESOL course aimed at parents of young children.

☐ for / with ☐

5. A maths course to provide a qualification to enable further learning.

☐ for / with ☐

6. A session on the importance of storytelling with useful ideas on how to encourage young children to engage with books.

☐ for / with ☐

Teaching ESOL in a family learning context

This step will help you to answer the following questions:

- What is the structure of the UK education system?
- What are key methodologies to consider in relation to ESOL learners?
- What teaching techniques can be applied in the classroom?

In **Step 2A** you will identify the key stages of the education system in the UK and will discover the particular skills and topics which are covered at each stage.

In **Step 2B** you will gain an insight into how English Language Teaching has developed and how this has shaped currently favoured methodology. You will learn about pedagogy which focuses on communicative language learning and teaching that responds directly to what the learners bring to the lesson.

Step 2C highlights some practical classroom techniques to enhance the learning environment in the ESOL classroom and make learning more effective.

Step 2

An overview of the education system in the UK

Step 2a

Family learning predominantly targets parents of children, so it is important to acquire a basic understanding of the general education system in the UK. In doing so, teachers are equipped to deliver appropriate sessions that match the needs of parents and children, according to the stage of the education system that is most relevant.

The initial stage of learning, birth to five years, is known as the Early Years Foundation Stage (EYFS). Any formal childcare provided during this time is regulated so that it meets the developmental and care needs of very young children according to the standards set by EYFS.

In the UK, most children start school when they are 4 or 5 years old and enter the reception class of primary school. While this marks the start of their school experience, children in reception class are still considered to be in the EYFS stage. The following two years of primary school (Years 1 and 2 - sometimes referred to as 'the infant stage') are called Key Stage 1, and the remainder of their primary education (Year 3 to 6) is known as Key Stage 2.

Secondary school begins when children are 11 years of age and covers Key Stage 3 (Year 7 to 9) and Key Stage 4 (Year 9 to 11). While Ofsted⁶ recommends that family learning provision should extend beyond Key Stage 2, it observed that the majority of family learning provision relates to families with children of primary school age and below.

⁶ OFSTED Family learning [<http://www.ofsted.gov.uk/resources/family-learning>]
Accessed: 4th August 2014

Activity 6

Listen to the audio and fill in the gaps.

Key Stages 1 and 2

During these stages, according to the _____, all children must be taught English, maths, science, design and technology, history, geography, art and design, music, PE and ICT. Other _____ subjects include RE, PSHE, citizenship and modern foreign languages. At Key Stage 1, tasks and tests are assessed by the _____ and the _____ decides when to do them. Key Stage 2 tests are _____ and are taken in _____. Parents/ carers will find out the results in July and will also receive a _____ from the teacher about their child's progress.

Listen

Click on the link and read the text. Complete the gaps with words from the box.

Key Stages 3 and 4

Read

parents
foundation
citizenship
SRE
national
GCSEs
core
compulsory

In these stages, the _____ national curriculum subjects are the same as in Key Stages 1 and 2, but children must also be taught _____ and a modern foreign language. RE and _____ are taught but are non-compulsory; _____ can choose to remove their children from these classes. In Key Stage 4, most pupils take _____ – these are _____ qualifications and children must study the _____ subjects of English, Maths and Science, as well as the _____ subjects of ICT, PE and citizenship. They may also choose other subjects from the areas of arts, design and technology, humanities and modern foreign languages.

Step 2a

English Language Teaching (ELT) Methodology

Competence in literacy, numeracy and language are considered basic skills for life. On the whole, it is usually language and literacy that pose the greatest problem for ESOL learners. To meet the needs of ESOL learners and help parents learn most effectively, it is useful to turn to English language teaching research and methodology.

While many attempts have been made to provide a neat timeline for the evolution of language teaching methodology, it is problematic to talk about the history of ELT in linear, chronological terms. Over the years, there have been many favoured approaches and a variety of psychological perspectives have influenced their development. Each methodology has its advantages and disadvantages, so it is useful to take an eclectic approach in relation to the needs of one's own learners.

The communicative approach is important to consider in relation to ESOL learners and is based on the idea that language learning comes through having to communicate real meaning. Learners employ natural strategies for language acquisition and this will help them to learn to use the language for themselves. In a family learning context, communicative language teaching is extremely important since it is largely a desire to communicate that draws learners to the classroom in the first place.

Activity 7

- Click on the link and read the information about the communicative approach.
- Think how you can incorporate communicative principles when you teach ESOL in a family learning context.

Read

Step 2b

There has been a great deal of interest in methodologies which are connected to communicative principles and focus on what learners themselves bring to the classroom. Such classes tend to be materials light and deal primarily with emergent language.

One example of this kind of approach is called Dogme ELT, which proposes that lessons and resources should be generated by the learners themselves. See 'Further reading' for more information about this approach. Another example is the Language Experience Approach, which is also based on the assumption that language will develop more naturally if what is being developed is initiated by the learner, as opposed to the teacher, course book or scheme of work. The Language experience approach will be studied in more detail in 2C.

Recent research has focussed on the power of group discussion in the ESOL classroom⁷. The research team involved felt that sufficient exploration and development of group discussion was lacking in most ESOL classrooms. They outlined a number of benefits of using group discussion as a primary tool for language development, as opposed to just using it to raise schemata or practise new language. Advantages include: learners produce language at a higher level, they learn new language from each other, they experiment more with language and develop new communication strategies. It is vital to centre debate around concrete themes which are of personal relevance and importance to the learners. Encouraging interaction to continue outside the classroom, often online, is also key.

Activity 8

- Think about topics which your learners would have a strong opinion about.
- How could you encourage learners to continue their class discussions into their daily lives?

⁶ BRITISH COUNCIL The power of group discussion [Online] Available from: <http://esol.britishcouncil.org/content/policy-and-research/new-research/research-awards-2013/power-group-discussion> Accessed: 4th August 2014

Practical classroom applications

Below are key strategies that will help make learning more effective and enjoyable.

Personalise learning

In order for language learning to flourish, it is important to choose interesting topics which have personal relevance to the learners. If learners are engaged, new language will be more memorable.

Activate learners' schemata

Schema theory is based on the idea that all learners come to class with a complex framework of knowledge, or schemata, which should be activated in order for connections to be made between existing knowledge and new information. If bonds are formed between what learners already know and new information, learning will be more memorable. Learners' prior knowledge, pictures and real objects can all be used to achieve this.

Elicit existing knowledge from the learners

Elicitation aims to get learners to provide content and feedback, rather than the teacher just giving it to them. As a result, learners are more engaged and know that their knowledge and opinions are valued.

Contextualise new language

Presenting language items in a relevant and authentic context, rather than as isolated units, helps to establish meaning and learners are more likely to remember and use language presented in this way. Contextualising

Step 2c

language also enables learners to attempt to guess meaning from context as they would do naturally in everyday life.

Activate new language

Once learners have engaged with the topic and spent time studying new language, they need to activate what they have learned. Sufficient classroom time should be allocated for this and learners should be encouraged to practise in their daily lives. This can be difficult for many ESOL learners who are settled in communities which speak their native language. In a family learning context, however, parents can be encouraged to speak in English with their children – the benefits of which are mutual.

Model target language

When new language is spoken aloud it becomes more memorable so it is important for learners to make productive use of it. By modelling (saying) target language, teachers provide learners with a 'correct' version to copy. Modelling target language often requires some reformulation on the part of the teacher. This can also be an error correction technique where the teacher repeats what the learner has said, but correctly, to provide a timely, accurate and relevant form.

Activity 9

Watch the video about the Language experience approach, where a teacher demonstrates the above techniques. Complete the gaps with the words from the box.

Watch video

The teacher in the video worked through various stages of the lesson. Initially, she used _____ to establish the meaning of _____ around a familiar and personally relevant topic. This _____ the language and _____ the learner. It also activated the learner's _____ in order to make new language more memorable. The teacher then _____ longer utterances from the learner which she _____ into complete sentences. The teacher wrote the sentences down which the teacher and learner read aloud. The teacher was able to _____ the target language so the learner could hear the correct version. The teacher then cut up the sentences into individual words and the learner put everything back into the correct order. The teacher also highlighted punctuation marks and the _____ of various words. This is an interactive, confidence-building process which involves encouragement, prompting, reinforcement and a lot of _____. After this study phase, it is important for teachers to encourage learners to _____ the new language by using it as much as possible.

engaged elicited praise reformulated schemata pronunciation
pictures vocabulary activate contextualised model praise

Key themes in family learning

This step will help you to answer the following question:

How could the following three themes be delivered in a family learning context while fulfilling the needs of ESOL learners?

- Health and well-being
- Child development
- Participation in society

In this section, three key topics within the above themes will be focused on. The methodologies and techniques covered in Step 2C will be integrated into examples of lesson plan outlines which aim to maximise learning in an ESOL family learning context.

In **Step 3A** you will focus on how to deliver a session based on the topic of 'Healthy eating'. This is just one example of a 'Health and well-being' session, which covers a broad spectrum such as physical health, nutrition, learning disabilities, depression and emotional fitness.

In **Step 3B** the theme is 'Child development'. Ideas for a lesson called 'Learning through play' are outlined and the main aims are to encourage parents to help their children develop through play.

Step 3C develops ideas for a family learning session on 'Participation in society' and is based on a lesson called 'Budgeting your money'. As a final task, you will think how the classroom techniques focused on throughout Step 3 can be applied to future family learning sessions that you teach.

Step 3

Health and well-being

Outlined below are the basic stages of a lesson plan based on the topic of 'Healthy eating'. It is a 'learning with the family' type lesson, with the result that parents will be able to discuss what they have learned with their children and the whole family can be empowered to make healthier food choices.

Activity 10

Read the outline of this lesson plan and then answer the questions.

Lesson: Healthy eating

Level: SfL E3 / SQA Intermediate 1 / CEFR B1

Time: 60 minutes

Aims:

- To develop learners' ability to speed read
- To develop learners' ability to talk about healthy eating
- To encourage learners to discuss healthy eating with their children and make healthy food choices as a family

Procedure

Warmer (5 minutes)

- Show a photo of a family eating dinner together.
Learners discuss what is happening.
- In pairs, learners tell each other what they had for dinner last night.
Elicit examples and write up on whiteboard. Check pronunciation.

Step 3a

Read

Step 3a

Task 1 - speaking (5 minutes)

- Learners discuss whether their dinner was healthy and what makes a healthy diet. Elicit that the topic of the session is 'Healthy eating'.

Task 2 – reading (15 minutes)

- Learners read an authentic text called '**A balanced diet**' from NHS Choices website.
- Learners have three minutes to read the text as quickly as possible and they should make a note of where they read up to.
- Learners read the text again from the start, for a further three minutes. Again, they should make a note of where they read up to. Learners should be able to read further, this second time. Repeat until learners have read the whole text.
- Learners now make notes about what makes a balanced diet.

Task 3 - speaking (15 minutes)

- Learners discuss a balanced diet again, in light of what they have just read.
- Elicit feedback from the whole class. Discuss how everyone can make improvements to their families' diets.
- Take time to discuss vocabulary that learners wish to learn more about.

Cooler - making a poster (20 minutes)

- Set learners up in small groups to design posters called 'A balanced diet' in order to consolidate information from the reading.

Homework

To make 'A balanced diet' poster with children at home.

Step 3a

Questions

1. How is learning personalised?
2. In which stage is schemata activated?
3. How many times does the teacher elicit rather than give information?
4. In which stage is contextualised language presented?
5. Which is the activation stage of the lesson?
6. When are there opportunities for the teacher to model new language?

Download a fuller 90 minute version of
the lesson plan and worksheets:

Download

Your learners may also enjoy
doing this activity too:

Activity

Child development

A child's development is enhanced when they are provided with plenty of opportunities for imaginative and physical play. Below are the basic stages of a 'learning with the family' lesson where it is assumed children are present and that their ideas direct the session. The aim is to help parents become more aware of the benefits of making time to play with their children and provide them with practical ideas to use at home.

Activity 11

Read the outline of this lesson plan and complete the gaps with words from the box.

Lesson: Learning through play

Level: SfL E3 / SQA Intermediate 1 / CEFR B1 Time: 60 minutes

Aims:

- To encourage learners to think about the benefits of learning through play
- To encourage learners and their children to participate in an activity which involves play
- To provide ideas for play activities for families to do at home

Preparation: Each child will need a bowl, a spoon, a cup of flour, a cup of salt, a cup of water and an apron. Make one small sample of dough prior to lesson.

Step 3b

Watch video

Procedure

Warmer (10 minutes)

- Learners and children watch the video and talk about familiar games and activities that are mentioned to raise their _____.
- _____ further examples of popular games and activities and discuss how these support child development.
- The video mentions playing with dough. Show learners a sample of salt dough and elicit how children could learn whilst playing with it, e.g. making shapes and decorations, making letters, counting games, making stories from character models, etc.

Task 1 - make salt dough (15 minutes)

- Provide each child with the utensils and ingredients to make their own dough.
- Read instructions for making salt dough aloud or elicit recipe from learners. Search for '*simple salt dough recipe*' online if necessary.
- Monitor learners. Discuss and _____ unfamiliar _____ vocabulary.

Task 2 - play with salt dough (20 minutes)

- Encourage children to play with their salt dough and make simple models. These could be family members or characters from a favourite story. Let this part of the session be guided by the children so learning is _____.
- Encourage parents to interact with their children and ask them to explain what they are making. Some children may wish to tell a story using their models.

Step 3b

Activity

Step 3b

Task 3 – discussion (10 minutes)

- Gather all learners and children together and display their models on a table.
- Ask each parent/carer and child to explain what they have created.

Cooler – class vote (5 minutes)

- Give each parent/carer and child a sticker and ask them to put it next to the model or story that they liked the best.
- Ask the older children to help count the votes to show which is the winner.

Homework

- Parent: Write down the salt dough recipe to _____ the vocabulary learned in the lesson and complete these activities.
- Parent and child: Bake and decorate model at home. Make more salt dough to incorporate other suggestions made in the Warmer.

contextualised schemata activate model personalised elicit

Participation in society

Resource

Sessions with a 'Participation in society' theme are often 'learning for the family' type lessons, which incorporate the development of language and numeracy skills, enabling parents to support their children's learning and participate in society.

This is a computer-based session where, ideally, there are enough computers for each learner or pair of learners. It is a listening and speaking lesson based on a self-access resource called 'Budgeting your money' which you can access [here](#).

Your learners could complete all the online activities on their own, or the tasks could be incorporated into a teacher-led session where you also encourage discussion tasks and pair work activities. Below is an example of how this could be achieved.

At the end of the session, signpost your learners to other self-access activities with a family learning focus.

Lesson: Budgeting your money

Level: SFL Level 1 / SQA Intermediate 2 / CEFR B2

Time: 60 minutes

Aims:

- To develop learners' ability to listen for specific information
- To develop learners' ability to talk about budgeting their money
- To develop learners' knowledge of words to talk about money

Procedure

Warmer (10 minutes)

- Show the picture of the couple counting their money.
- In pairs, learners discuss the photo. Elicit that the topic of the session is budgeting and learning how to keep a check on spending.

Step 3c

Step 3c

- As a group, discuss the benefits of doing a budget and the dangers of not doing one. Elicit ideas from learners encourage them to write them on the whiteboard.

Task 1 - comprehension (10 minutes)

- Learners complete the online task on their own or with a partner and check their answers. Elicit feedback as a group

Task 2 - vocabulary (15 minutes)

- Learners complete the online vocabulary task on their own or in pairs.
- Elicit feedback and check pronunciation.
- Hand out the transcript at this point and tell the learners to underline all the words from the vocabulary to see how they are used in context in the video.
- Discuss any other new vocabulary from the video.

Task 3 - summary (15 minutes)

- Learners complete the summary on their own or with a partner.
- Take turns to read the summary aloud, focusing on pronunciation and intonation. If learners prefer, they could practise reading the original video transcript aloud and imagine they are making a similar advisory video.

Cooler - vocabulary review competition (10 minutes)

- Divide learners into teams. Place a chair at the front of the classroom and ensure it faces away from the board. Call this the 'hot seat'.
- Each team takes it in turns to send one of its learners to sit in the hot seat.
- Write a word from Task 2 on the board. The team whose learner is in the hot seat must describe this word so that their learner guesses it. To win a point, the learner must say the word clearly and accurately.

**Resource**

- Repeat until all the words from Task 2 have been used and a winning team is established.

Homework

Use the online budgeting tool mentioned in the video to make a budget at: www.moneysavingexpert.com/banking/Budget-planning.

Activity 12

Think about other family learning themes and topics relevant to your learners. How could you plan these sessions based on the lesson stages outlined in Step 3?

Reflection

In this module you have explored the issues surrounding ESOL in a family learning context and considered how to deliver sessions to fulfil the needs of learners in your classes. Now spend a short time reflecting on what you have learnt.

Stage 1: What?

Consider what you want to remember about:

- An introduction to family learning
- Teaching ESOL in a family learning context
- Key themes in family learning

Stage 2: So what?

Reflect by considering your thoughts and feelings about the content in the module and making some notes.

What do you feel about teaching ESOL sessions in a family learning context? Have there been any changes in your thinking about how to teach ESOL learners? How will what you have learnt affect the people you teach?

Stage 3: Now what?

How can you apply what you have learnt in this module to your own teaching context?

How will you apply your learning from the module?

What will you do in the classroom that you didn't do before?

Suggested answers to activities

Suggested answers to activities

Activity 10

1. The topic of healthy eating will be relevant to all learners who are raising a family. Opinions on food often provoke strong reactions and lively debate.
2. In the warmer, by showing a photo and getting learners to talk about what they had for dinner the previous evening.
3. 3 times in this plan. Elicitation should occur whenever there is an opportunity for learners to provide content and feedback.
4. In the authentic reading task.
5. The cooler and the homework task.
6. When the teacher reformulates the learners' errors during the feedback stages of tasks and when they are discussing vocabulary from the reading.

Activity 11

1. schemata 2. elicit 3. model 4. contextualised 5. personalised 6. activate

Activity 12

1. schemata 2. elicit 3. model 4. contextualised 5. personalised 6. activate
